Industrial Training Intake Test – Part 2

Debrief

Welcome to part of the Industrial Training – Part 2. In this test, you will go ahead and start putting some structure to your project.

Before you start this part, we hope you've participated and complete Part 1. You should have a project in git private repository. In this section, you will upskill on the following topics:

1. Agile –Essentials
2. Product Backlog.
3. Exercise – Atlassian JIRA

All above knowledge is required irrespective of your specialist track. This is changing the mindset from 'me' to 'us'. The reason why most of the large-scale enterprise fails is not lack of skills or technology. It is the **lack of communication**. If you are not a team player, this opportunity isn't for you.

The underlying principle a good project takes is to work with decent team members who works well with each other than one superstar. The complexity of the enterprise grade project is ginormous. Specially with Open AI coming in, a 'single superstar' mentality is counterproductive. It is how your collective work together and help each other grow. Microsoft and Xansr fundamental values are to have a growth mindset and help your colleagues.

How do we work together? Agile is one of the most followed methodologies. Internet is full of various definitions of Agile and debates on what Agile is.

Here is our definition, if you're taking progressing in the right direction and everyone clearly understands what you're working on, you're agile.

Xansr uses Agile Scrum. Here is a brief video of how to do it.

Introduction to Scrum

Atlassian JIRA

Atlassian JIRA is a leading agile product management suite. Please create an account using your xansrmedia or university ID. Create a scrum project called Hyper. We would like you to go ahead and create a few Epic, Features and User-Stories for the Gamification project (EFU).

Here is how you understand the basics and get started with JIRA.

<https://www.youtube.com/watch?v=GWxMTvRGipc>

We will use what is learnt in this tool to do an exercise to create a practise project hyper. Below is the debrief of the project. You would need to go ahead and create EFU with one sprint setup. Each story is expected to be in a high quality as you learnt in the videos. It needs to be have a description, acceptance criteria and definition of done. If the concepts are not clear, please use your faculty's assistance or online videos to search it.

Project Hyper wants to create a gamification platform on its OTT platform. OTT platforms are the likes of Netflix, Jio Cinema, Zee5 where users can login and watch their favourite movie, series of sports. Hyper's OTT platform is catered for sports – IPL Cricket. When the user logs in before the match is about to start, they receive a push notification on their OTT platform that they can play a predictive challenge game. Here is an example of how the platform looks.

Exercise

Below is a series of screenshots that shows how a user can play predictive challenge for the upcoming sport match. You need to create a backlog with Epic, features and user-stories for predictive challenge. There is no right or wrong answer on how to create EFUs. It is upto you how you would like to structure. The idea is to learn how to create the right Epic, Features and User-stories.

Make predictions about the IPL 2023 tournament matches and stand to win exciting rewards.

CLUTCHPOINTS

[Maybe Later](#) [PLAY NOW](#)

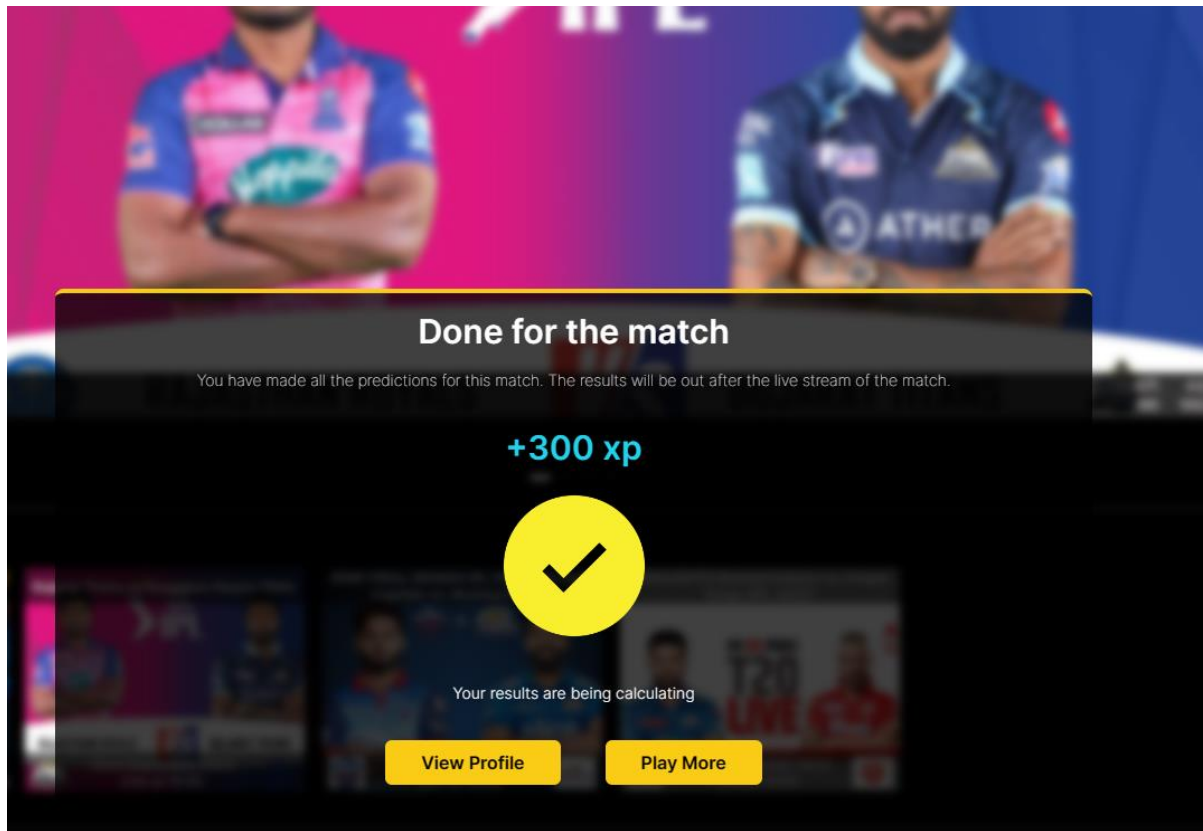

You stand to win: 40 ●

5. Will any team score 250 or more runs in an IPL 2023 match?

Yes

No

Submit

These questions would be different for each match or cricket tournament. You don't need to create the entire backlog but up 1-2 Epics, 3 features and 10 user stories in the project hyper connected to these features.

Checklist

1. Atlassian JIRA account is created
2. Project is created with the right nomenclature.
3. Epics, Features and User stories are created
4. JIRA Invitation is sent to vebz.panchal@xansrmedia.com

Alright, now please ensure that both technical parts checklist is covered. It is time to go back
